

Materi Pertemuan 10 - Checkout Process

Use Case

1. User bisa melanjutkan keranjang belanja menuju proses pembayaran

Database

1. Table orders
 - id
 - user_id
 - status
 - total_price
 - shipping_address
 - zip_code
 - created_at
 - updated_at
2. Table order_items
 - id
 - order_id
 - product_id
 - quantity
 - price
 - create_at
 - updated_at
3. Finish

Prasarat

1. Laravel yang digunakan versi 5.8.4
2. Mengerjakan latihan dan tutorial pada 'Materi Pertemuan 9 - 2 - Keranjang Belanja'

Membuat Table dan Model

1. Kita akan membuat migration dan model Order
php artisan make:model Order -m
2. Pindahkan file app/Order.php ke app/Models/Order.php. Kemudian edit file model Order.php menjadi seperti ini

```
1  <?php
2
3  namespace App;
4
5  use Illuminate\Database\Eloquent\Model;
6
7  class Order extends Model
8  {
9      /**
10       * The attributes that are mass assignable.
11       *
12       * @var array
13       */
14       protected $fillable = [
15           'user_id', 'status', 'total_price', 'shipping_address', 'zip_code'
16       ];
17  }
18
```

3. Kita buat scheme table database dengan menambahkan code pada file database/migration/..._create_orders_table.php

```
1  <?php
2
3  use Illuminate\Support\Facades\Schema;
4  use Illuminate\Database\Schema\Blueprint;
5  use Illuminate\Database\Migrations\Migration;
6
7  class CreateOrdersTable extends Migration
8  {
9      /**
10       * Run the migrations.
11       *
12       * @return void
13       */
14     public function up()
15     {
16         Schema::create('orders', function (Blueprint $table) {
17             $table->bigIncrements('id');
18             $table->integer('user_id');
19             $table->string('status');
20             $table->string('total_price');
21             $table->text('shipping_address');
22             $table->integer('zip_code');
23             $table->timestamps();
24         });
25     }
26
27     /**
28      * Reverse the migrations.
29      *
30      * @return void
31      */
32     public function down()
33     {
34         Schema::dropIfExists('orders');
35     }
36 }
37
```

4. Jalankan
php artisan migrate
5. Selanjutnya kita akan membuat migration dan model OrderItem
php artisan make:model OrderItem -m
6. Pindahkan file app/OrderItem.php ke app/Models/OrderItem.php. Kemudian edit file
model OrderItem.php menjadi seperti ini

```
1  <?php
2
3  namespace App;
4
5  use Illuminate\Database\Eloquent\Model;
6
7  class OrderItem extends Model
8  {
9      /**
10       * The attributes that are mass assignable.
11       *
12       * @var array
13       */
14       protected $fillable = [
15           'order_id', 'product_id', 'quantity', 'price'
16       ];
17  }
18
```

7. Kita buat scheme table database dengan menambahkan code pada file database/migration/..._create_order_items_table.php

```
1  <?php
2
3  use Illuminate\Support\Facades\Schema;
4  use Illuminate\Database\Schema\Blueprint;
5  use Illuminate\Database\Migrations\Migration;
6
7  class CreateOrderItemsTable extends Migration
8  {
9      /**
10       * Run the migrations.
11       *
12       * @return void
13       */
14     public function up()
15     {
16         Schema::create('order_items', function (Blueprint $table) {
17             $table->bigIncrements('id');
18             $table->integer('order_id');
19             $table->integer('product_id');
20             $table->integer('quantity');
21             $table->integer('price');
22             $table->timestamps();
23         });
24     }
25
26     /**
27      * Reverse the migrations.
28      *
29      * @return void
30      */
31     public function down()
32     {
33         Schema::dropIfExists('order_items');
34     }
35 }
36
```

8. Jalankan
php artisan migrate
9. Finish

Membuat Controller Order

1. Generate controller order dengan menjalankan command dibawah ini
php artisan make:controller Admin/OrderController --resource
2. Command diatas akan men-generate file
app/Http/Controllers/Admin/OrderController.php dengan 7 method yang sudah tersedia:
 - index() → untuk menampilkan list order
 - create() → untuk menambah order baru (form view)
 - store() → untuk menambah order baru (form action)
 - show() → untuk melihat detail order
 - edit() → untuk meng-edit order (form view)
 - update() → untuk meng-edit order (form action)
 - destroy() → untuk menghapus order (FUNGSI INI TIDAK AKAN KITA PAKAI)
3. Tambahkan code dibawah ini, untuk membatasi guest user (line 7 dan line 16-19)

```
1  <?php
2
3  namespace App\Http\Controllers\Admin;
4
5  use Illuminate\Http\Request;
6  use App\Http\Controllers\Controller;
7  use Auth;
8
9  class OrderController extends Controller
10 {
11     /**
12      * Create a new controller instance.
13      *
14      * @return void
15      */
16     public function __construct()
17     {
18         $this->middleware('auth');
19     }
20
21     /**
22      * Display a listing of the resource.
23      *
24      * @return \Illuminate\Http\Response
25      */
26     public function index()
27     {
28         //
29     }
```

4. Pada file routes/web.php, tambahkan code dibawah ini (line 28)

```
23 Route::name('admin.')->group(function () {
24     Route::group(['prefix' => 'admin'], function () {
25         Route::resource('products', 'Admin\ProductController');
26         Route::get('/products/image/{imageName}', 'Admin\ProductController@image')->name('products.image');
27     });
28     Route::resource('orders', 'Admin\OrderController');
29 });
30 };
```

5. Untuk melihat hasil dari settingan routes diatas, jalankan command dibawah ini
php artisan route:list | grep order

GET HEAD	admin/orders	12	admin.orders.index	App\Http\Controllers\Admin\OrderController@index
POST	admin/orders	13	admin.orders.store	App\Http\Controllers\Admin\OrderController@store
GET HEAD	admin/orders/create	14	admin.orders.create	App\Http\Controllers\Admin\OrderController@create
DELETE	admin/orders/{order}	15	admin.orders.destroy	App\Http\Controllers\Admin\OrderController@destroy
PUT PATCH	admin/orders/{order}	16	admin.orders.update	App\Http\Controllers\Admin\OrderController@update
GET HEAD	admin/orders/{order}	17	admin.orders.show	App\Http\Controllers\Admin\OrderController@show
GET HEAD	admin/orders/{order}/edit	18	admin.orders.edit	App\Http\Controllers\Admin\OrderController@edit

6. Finish

Membuat Function Untuk Membuat Order Baru

1. Edit file app/Models/Order.php, tambahkan code dibawah ini (line 18-32)

```
1 <?php
2
3 namespace App\Models;
4
5 use Illuminate\Database\Eloquent\Model;
6
7 class Order extends Model
8 {
9     /**
10      * The attributes that are mass assignable.
11      *
12      * @var array
13      */
14     protected $fillable = [
15         'user_id', 'status', 'total_price', 'shipping_address', 'zip_code'
16     ];
17
18     /**
19      * Get the user that owns the order.
20      */
21     public function user()
22     {
23         return $this->belongsTo('App\User');
24     }
25
26     /**
27      * Get the order_items for the order.
28      */
29     public function orderItems()
30     {
31         return $this->hasMany('App\Models\OrderItem');
32     }
33 }
34
```

2. Edit file `app/Models/OrderItem.php`, tambahkan code dibawah ini (line 18-24)

```
1  <?php
2
3  namespace App\Models;
4
5  use Illuminate\Database\Eloquent\Model;
6
7  class OrderItem extends Model
8  {
9      /**
10       * The attributes that are mass assignable.
11       *
12       * @var array
13       */
14       protected $fillable = [
15           'order_id', 'product_id', 'quantity', 'price'
16       ];
17
18       /**
19        * Get the product that owns the order_item.
20        */
21       public function product()
22       {
23           return $this->belongsTo('App\Models\Product', 'product_id');
24       }
25   }
26
```

3. Edit file `app/Http/Controllers/Admin/OrderController.php` tambahkan use method di atas class.
- use App\Models\Order;**
use App\Models\OrderItem;
4. Buat file view baru dengan nama `resources/views/admin/orders/create.blade.php`, code nya seperti dibawah ini

```
1 @extends('layouts.app')
2
3 @section('content')
4     <div class="container">
5         <div class="row justify-content-center">
6             <div class="col">
7                 <h2>Menambahkan Alamat</h2>
8
9                 <br />
10                @if(count($errors))
11                    <div class="form-group">
12                        <div class="alert alert-danger">
13                            <ul>
14                                @foreach($errors->all() as $error)
15                                    <li>{{$error}}</li>
16                                @endforeach
17                            </ul>
18                        </div>
19                    </div>
20                @endif
21                <br />
22
23                <form action="{{ route('admin.orders.store') }}" method="POST">
24                    @csrf
25                    <div class="form-group">
26                        <label>Alamat Pengiriman</label>
27                        <textarea name="shipping_address" class="form-control" rows="3" placeholder="Alamat Pengiriman"></textarea>
28                    </div>
29                    <div class="form-group">
30                        <label>Kode Pos</label>
31                        <input type="number" name="zip_code" class="form-control" placeholder="Kode Pos">
32                    </div>
33                    <button type="submit" class="btn btn-primary">Simpan</button>
34                </form>
35            </div>
36        </div>
37    </div>
38 @endsection
39
```

5. Edit file `app/Http/Controllers/Admin/OrderController.php` method `create()`, menjadi seperti ini

```
34 /**
35  * Show the form for creating a new resource.
36  *
37  * @return \Illuminate\Http\Response
38  */
39 public function create()
40 {
41     // Menambahkan kondisi untuk memvalidasi keranjang belanja, kalau keranjang belanja ada, baru bisa bikin order
42     $cart = session()->get('cart');
43     if($cart) {
44         return view('admin.orders.create');
45     } else {
46         return redirect('/')->with('success', 'Anda harus belanja terlebih dahulu!');
47     }
48 }
49
```

6. Edit file `app/Http/Controllers/Admin/OrderController.php` method `store()`, menjadi seperti ini

```
50      /**
51       * Store a newly created resource in storage.
52       *
53       * @param \Illuminate\Http\Request $request
54       * @return \Illuminate\Http\Response
55       */
56      public function store(Request $request)
57      {
58          $this->validate(request(), [
59              'shipping_address' => 'required',
60              'zip_code' => 'required'
61          ]);
62
63          // Get total price
64          $cart = session()->get('cart');
65          $total_price = 0;
66          foreach ($cart as $id => $product) {
67              $total_price += $product['price'] * $product['quantity'];
68          }
69          // Get total price
70
71
72          $order = new Order();
73          $order->user_id = Auth::user()->id;
74          $order->status = 'PENDING';
75          $order->shipping_address = $request->post('shipping_address');
76          $order->zip_code = $request->post('zip_code');
77          $order->total_price = $total_price;
78          $order->save();
79
80          // Save order item
81          foreach ($cart as $id => $product) {
82              $orderItem = new OrderItem();
83              $orderItem->order_id = $order->id;
84              $orderItem->product_id = $id;
85              $orderItem->quantity = $product['quantity'];
86              $orderItem->price = $product['price'];
87              $orderItem->save();
88          }
89          // Save order item
90
91          // remove chart session
92          session()->forget('cart');
93          // remove chart session
94
95
96          return redirect('admin/orders/' . $order->id)->with('success', 'Order berhasil di simpan');
97      }
98  }
```

7. Buat file view baru dengan nama resources/views/admin/orders/show.blade.php, code nya seperti dibawah ini

```
1 @extends('layouts.app')
2
3 @section('content')
4 <div class="container">
5   <div class="row justify-content-center">
6     <div class="col">
7       <div class="row">
8         <div class="col">
9           <h2>
10            <span class="badge badge-primary">Alamat Pengiriman</span>
11          </h2>
12          <p>
13            {{ $order->shipping_address }}
14          </p>
15        </div>
16      </div>
17      <div class="row">
18        <div class="col">
19          <h2>
20            <span class="badge badge-primary">Kode Pos</span>
21          </h2>
22          <p>
23            {{ $order->zip_code }}
24          </p>
25        </div>
26      </div>
27      <div class="row">
28        <div class="col">
29          <h2>
30            <span class="badge badge-primary">Harga Total</span>
31          </h2>
32          <p>
33            {{ $order->total_price }}
34          </p>
35        </div>
36      </div>
37    </div>
38  </div>
39
40 <div class="row justify-content-center">
41   <div class="col">
42     <table id="cart" class="table table-hover table-condensed">
43       <thead>
44         <tr>
45           <th style="width:50%">Product</th>
46           <th style="width:10%">Price</th>
47           <th style="width:8%">Quantity</th>
48           <th style="width:22%" class="text-center">Subtotal</th>
49         </tr>
50       </thead>
51       <tbody>
52
53         @foreach($order->orderItems as $orderItem)
54           <tr>
55             <td data-th="Product">
56               <div class="row">
57                 <div class="col-sm-3 hidden-xs"></div>
59                 <div class="col-sm-9">
60                   <a href="{{ route('products.show', ['id' => $orderItem->product->id]) }}">
61                     <h4 class="nomargin">{{ $orderItem->product->name }}</h4>
62                   </a>
63                 </div>
64               </div>
65             </td>
66             <td data-th="Price">
67               {{ $orderItem->price }}
68             </td>
69             <td data-th="Quantity">
70               {{ $orderItem->quantity }}
71             </td>
72             <td data-th="Subtotal" class="text-center">
73               {{ $orderItem->price * $orderItem->quantity }}
74             </td>
75           </tr>
76         @endforeach
77       </tbody>
78     </table>
79   </div>
80 </div>
81
82 @endsection
```

8. Edit file `app/Http/Controllers/Admin/OrderController.php` method `show()`, menjadi seperti ini

```
99      /**
100       * Display the specified resource.
101       *
102       * @param int $id
103       * @return \Illuminate\Http\Response
104       */
105      public function show($id)
106      {
107          $order = Order::find($id);
108          if ($order) {
109              return view('admin.orders.show', compact('order'));
110          } else {
111              return redirect('admin/orders')->with('errors', 'Order tidak ditemukan');
112          }
113      }
114  }
```

9. Buat file view baru dengan nama `resources/views/admin/orders/index.blade.php`, code nya seperti dibawah ini

```
1  @extends('layouts.app')
2
3  @section('content')
4      <div class="container">
5          <div class="row justify-content-center">
6              <div class="col">
7                  <h2>List Order</h2>
8                  <div>
9                      <a href="{{ route('admin.products.create') }}" class="btn btn-primary">Tambah Produk</a>
10                 </div>
11                 <br />
12                 <div class="table-responsive">
13                     <table class="table table-striped table-sm">
14                         <thead>
15                             <tr>
16                                 <th>#</th>
17                                 <th>Harga Total</th>
18                                 <th>Status</th>
19                                 <th>Kode Pos</th>
20                                 <th>Alamat Pengiriman</th>
21                                 <th>Action</th>
22                             </tr>
23                         </thead>
24                         <tbody>
25                             @foreach($orders as $order)
26                                 <tr>
27                                     <td>{{ $order['id'] }}</td>
28                                     <td>{{ $order['total_price'] }}</td>
29                                     <td>{{ $order['status'] }}</td>
30                                     <td>{{ $order['zip_code'] }}</td>
31                                     <td>{{ $order['shipping_address'] }}</td>
32                                     <td>
33                                         <a href="{{ route('admin.orders.show', ['id' => $order['id']]) }}">
34                                             Lihat
35                                         </a>
36                                     </td>
37                                 </tr>
38                             @endforeach
39                         </tbody>
40                     </table>
41                 </div>
42             </div>
43         </div>
44     </div>
45 @endsection
```

10. Edit file `app/Http/Controllers/Admin/OrderController.php` method `index()`, menjadi seperti ini

```
23      /**
24       * Display a listing of the resource.
25       *
26       * @return \Illuminate\Http\Response
27       */
28      public function index()
29      {
30          $orders=Order::where('user_id', '=', Auth::user()->id)->get();
31          return view('admin.orders.index', compact('orders'));
32      }
```

11. Edit file `viewresources/views/carts/index.blade.php`, tambahkan code nya seperti dibawah ini (line 55)

```
48      <tfoot>
49          <tr class="visible-xs">
50              <td class="text-center"><strong>Total {{ $total }}</strong></td>
51          </tr>
52          <tr>
53              <td>
54                  <a href="{{ url('/') }}" class="btn btn-warning"><i class="fa fa-angle-left"></i> Lanjutkan Belanja</a>
55                  <a href="{{ route('admin.orders.create') }}" class="btn btn-primary"><i class="fa fa-angle-left"></i> Lanjut ke Pembayaran</a>
56              </td>
57              <td colspan="2" class="hidden-xs"></td>
58              <td class="hidden-xs text-center"><strong>Total ${{ $total }}</strong></td>
59          </tr>
60      </tfoot>
```

12. Sample halaman tambah order baru

Laravel Cart ¹ Product ▾ Order ▾ Ramdan ▾

Manambahkan Alamat

Alamat Pengiriman

Kode Pos

13. Sample halaman show detail order
-

Laravel **Cart 1** Product ▼ Order ▼ Ramdan ▼

Alamat Pengiriman
Ini adalah alamat pengiriman

Kode Pos
12345

Harga Total
5000

Product	Price	Quantity	Subtotal
 Produk 1	1000	1	1000
 Product 2	2000	2	4000

14. Sample halaman list order

Laravel **Cart 1** Product ▼ Order ▼ Ramdan ▼

List Order
[Tambah Produk](#)

#	Harga Total	Status	Kode Pos	Alamat Pengiriman	Action

7	2000	PENDING	12345	Politkenik TEDC Bandung Jalan Pesantren KM 2 Cibabat Cimahi	Lihat

15. Finish

Tantangan

1. Silahkan ubah halaman list order, new order dan detail order sesuai dengan selera anda.
2. Pisahkan input alamat (di page new order) menjadi beberapa field:
 - address (bisa untuk dusun, RT RW, nama jalan)
 - address_line2 (bisa untuk desa atau kelurahan)
 - district (bisa untuk kecamatan)
 - city (bisa untuk kota/kab)
 - province (bisa untuk provinsi)
 - zip_code (bisa untuk kode pos)
 - phone_number (bisa untuk nomor telephone)
3. Finish
