

Mengirim Email Menggunakan Gmail SMTP

Tujuan

Bagaimana supaya aplikasi bisa mengirim email?

Pengiriman email ini berguna sekali untuk melakukan konfirmasi, misalkan setelah melakukan pendaftaran user akan menerima email untuk melakukan konfirmasi pendaftaran. Contoh lain adalah ketika kita melakukan 'Lupa Password', maka aplikasi akan mengirim email untuk me-reset password kita.

Kita akan membuat aplikasi yang bisa mengirim email.

1. User akan memasukan alamat email nya

Please Type Your Email Address

Demo App: How To Send Email With Gmail

2. Aplikasi melakukan validasi email required

Please Type Your Email Address

Demo App: How To Send Email With Gmail

The email field is required. x

3. Kalau user memasukan email yang valid, maka aplikasi akan mengirim email

localhost:8000

Please Type Your Email Address

Demo App: How To Send Email With Gmail

Email has been sent successfully. Please check your email. ✕

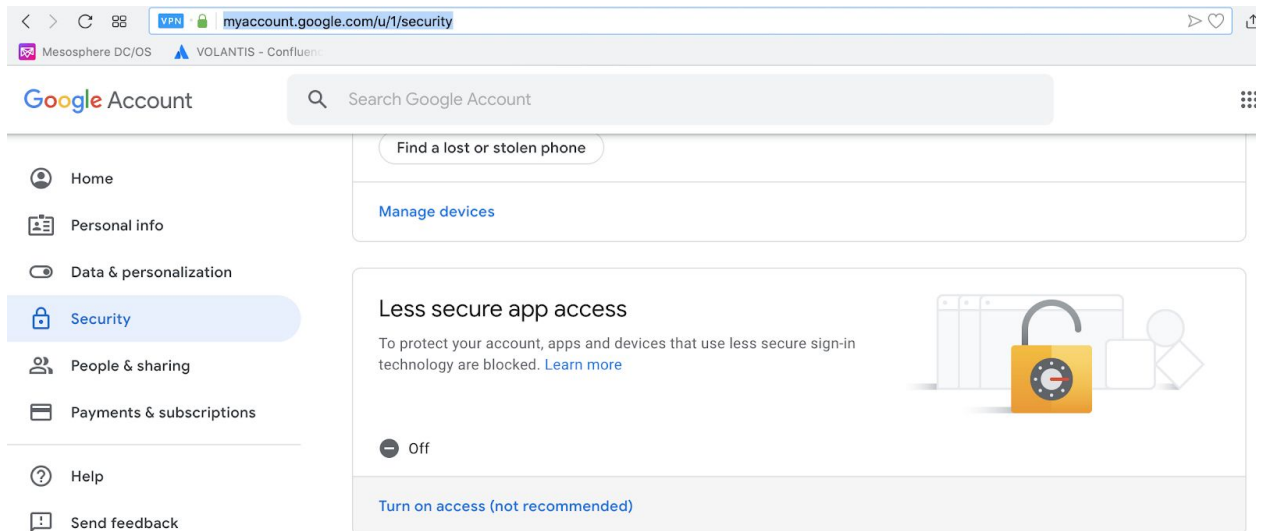

SEND

4. Finish

Setting Gmail

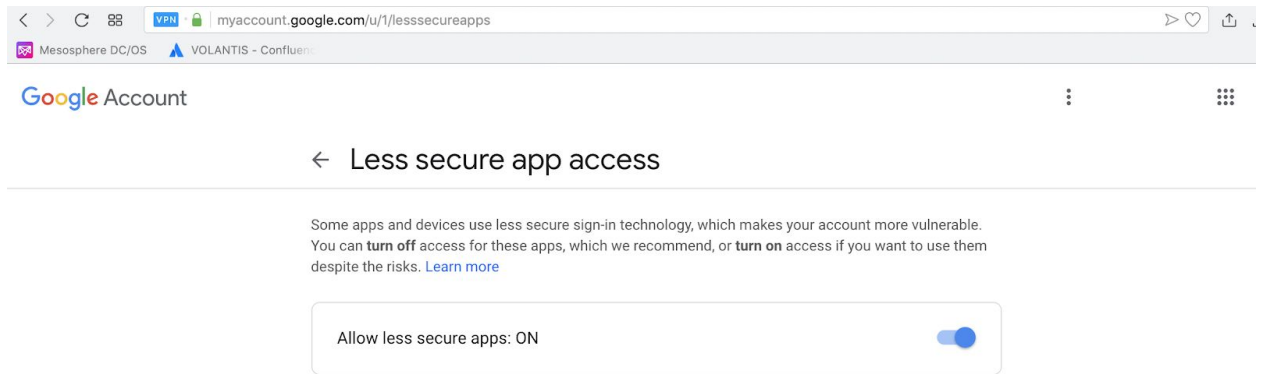

Supaya kita bisa mengirim email menggunakan Gmail melalui aplikasi laravel, maka kita perlu melakukan settingan pada akun google kita. Ikuti langkah-langkah dibawah ini.

1. <https://myaccount.google.com/security#connectedapps>
2. **Sign-in & security -> Connected apps & sites -> Allow less secure apps settings.**

3. "Allow less secure apps" **ON**.

Teknologi Web 2 - Mengirim Email Menggunakan Gmail SMTP

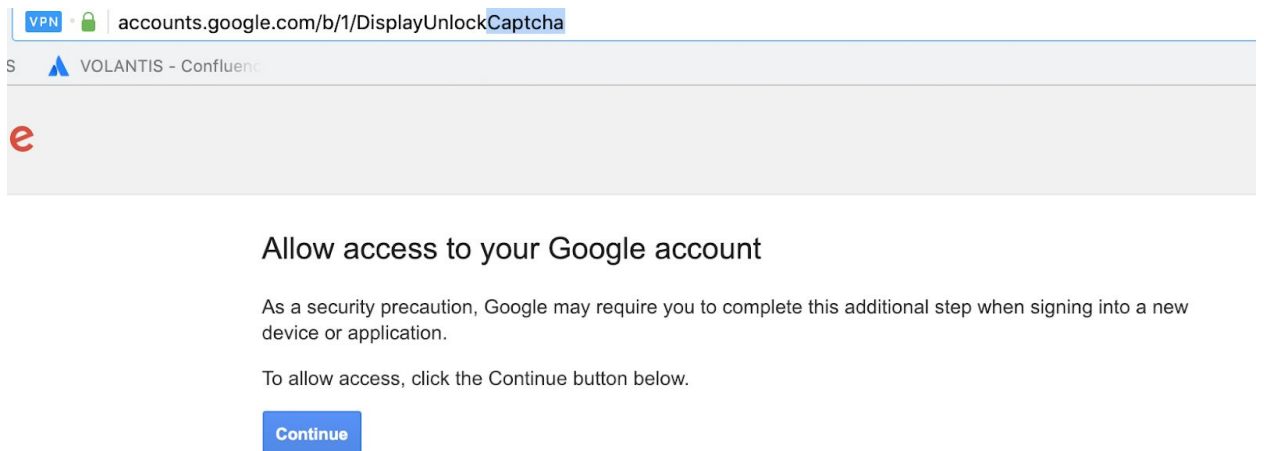

4. Finish

Unlock Gmail Captcha

Tahap ini adalah lanjutan dari setting Gmail.

1. <https://www.google.com/accounts/DisplayUnlockCaptcha>
2. Klik Continue

3. Konfirmasi bahwa akun gmail kita telah di unlock/enable

Account access enabled

Please try signing in to your Google account again from your new device or application.

4. Finish

Setting Basic Laravel App

1. Install laravel
`composer global require laravel/installer`
2. Membuat project laravel
`composer create-project --prefer-dist laravel/laravel laravel_mailer`
3. Generate artisan key
`php artisan key:generate`
4. Setting Database pada file .env
`DB_CONNECTION=mysql`
`DB_HOST=127.0.0.1`
`DB_PORT=3306`
`DB_DATABASE=homestead`
`DB_USERNAME=homestead`
`DB_PASSWORD=secret`

5. Edit file resources/views/welcome.php. Silahkan anda berkreasi untuk meuat halaman web yang lebih bagus, yang perlu diperhatikan ada pada:

- Line 18 - 26
- Line 28 - 38
- Line 40 - 47

```
1 <!doctype html>
2 <html lang="{{ app()->getLocale() }}">
3
4 <head>
5     <meta charset="utf-8">
6     <meta http-equiv="X-UA-Compatible" content="IE=edge">
7     <meta name="viewport" content="width=device-width, initial-scale=1">
8     <title>Laravel</title>
9     <!-- Bootstrap core CSS -->
10    <link href="https://cdnjs.cloudflare.com/ajax/libs/twitter-bootstrap/4.0.0/css/bootstrap.min.css" rel="stylesheet">
11    <!-- Fonts -->
12    <link href="https://fonts.googleapis.com/css?family=Raleway:100,600" rel="stylesheet" type="text/css">
13 </head>
14 <body>
15     <div class="container" style="margin-top: 100px; width: 600px;">
16         <h2 class="text-center">Please Type Your Email Address</h2>
17         <h3 class="text-center">Demo App: How To Send Email With Gmail</h3><br><br>
18
19         <!-- Code to show Success Message -->
20         @if(session('success'))
21             <div class="alert alert-success alert-dismissible fade show" role="alert">
22                 {{session('success')}}
23                 <button type="button" class="close" data-dismiss="alert" aria-label="Close">
24                     <span aria-hidden="true">&times;</span>
25                 </button>
26             </div>
27         @endif
28
29         <!-- Code to show Error Message -->
30         @if(count($errors)>0)
31             @foreach($errors->all() as $error)
32                 <div class="alert alert-danger alert-dismissible fade show" role="alert">
33                     {{ $error }}
34                     <button type="button" class="close" data-dismiss="alert" aria-label="Close">
35                         <span aria-hidden="true">&times;</span>
36                     </button>
37                 </div>
38             @endforeach
39         @endif
40
41         <!-- Form to input email address -->
42         <form action="hello/send-welcome-email" method="POST">
43             {{ csrf_field() }}
44             <div class="form-group">
45                 <input type="email" class="form-control text-center" placeholder="Provide an email" name="email"><br>
46                 <button type="submit" class="btn btn-primary btn-md" style="margin-left: 0px;margin: auto; display: block;">SEND</button>
47             </div>
48         </form>
49     </div>
50
51     <script type="text/javascript" src="https://cdnjs.cloudflare.com/ajax/libs/jquery/3.2.1/jquery.min.js"></script>
52     <!-- Bootstrap core JavaScript -->
53     <script type="text/javascript" src="https://cdnjs.cloudflare.com/ajax/libs/twitter-bootstrap/4.0.0/js/bootstrap.min.js"></script>
54 </body>
55 </html>
```

6. Finish

Add Mailer Functionality

1. Edit mailer setting pada file .env
MAIL_DRIVER=smtp
MAIL_HOST=smtp.gmail.com
MAIL_PORT=587
MAIL_USERNAME=YOUR_GMAIL_EMAIL
MAIL_PASSWORD=YOUR_GMAIL_PASSWORD
MAIL_ENCRYPTION=tls
2. Edit file config/mail.php pada line 58-61 (number line nya bisa berbeda).

```
'from' => [  
    'address' => env('MAIL_FROM_ADDRESS',  
PLEASE_EDIT_ME@example.com'),  
    'name' => env('MAIL_FROM_NAME', 'PLEASE_EDIT_ME'),  
],
```

3. Buat class mailer di app/Mailer/HelloMailer.php

```
1  <?php
2
3  namespace App\Mailer;
4
5  use Illuminate\Bus\Queueable;
6  use Illuminate\Mail\Mailable;
7  use Illuminate\Queue\SerializesModels;
8  use Illuminate\Contracts\Queue\ShouldQueue;
9
10 class HelloMailer extends Mailable
11 {
12     use Queueable, SerializesModels;
13
14     /**
15      * Create a new message instance.
16      *
17      * @return void
18      */
19     public function __construct()
20     {
21         //
22     }
23
24     /**
25      * Build the message.
26      *
27      * @return $this
28      */
29     public function build()
30     {
31         # this code will use template in resource/views/mailer/hello_mailer.blade.php
32         # this code will send email with subject 'Hello Mailer'
33         return $this->view('mailer/hello_mailer')->subject('Hello Mailer');
34     }
35 }
36
```

4. Buat view untuk template email di resources/views/mailer/hello_mailer.blade.php. Silahkan anda berkreasi untuk membuat template email yang lebih bagus.

```
1  <!DOCTYPE html>
2  <html>
3  <head>
4      <title>Hello Mailer</title>
5  </head>
6  <body>
7      <p>This email sent by laravel application with gmail SMTP.</p>
8  </body>
9  </html>
```

5. Tambahkan routing untuk menerima input email dari user

```
1  <?php
2
3  /*
4  |-----
5  | Web Routes
6  |-----
7  |
8  | Here is where you can register web routes for your application. These
9  | routes are loaded by the RouteServiceProvider within a group which
10 | contains the "web" middleware group. Now create something great!
11 |
12 */
13
14 Route::get('/', function () {
15     return view('welcome');
16 });
17
18 // Create routing for send email
19 Route::post('hello/send-welcome-email', 'HelloController@sendWelcomeEmail');
```

6. Buat controller baru pada app/Http/Controllers/HelloController.php

```
1  <?php
2
3  namespace App\Http\Controllers;
4
5  use Illuminate\Http\Request;
6  use Illuminate\Support\Facades\Input;
7  use Illuminate\Support\Facades\Mail; // Laravel mailer library
8  use AppMailer\HelloMailer; // Our mailer
9
10 class HelloController extends Controller
11 {
12     public function sendWelcomeEmail(Request $request)
13     {
14         // Validate email address
15         $this->validate($request, [
16             'email' => 'required'
17         ]);
18
19         // This code will trigger HelloMailer class to send email
20         Mail::to($request->input('email'))->send(new HelloMailer());
21
22         // Redirect and send message about status sending email request
23         return redirect()->back()->with('success', 'Email has been sent successfully. Please check your email.'
24         );
25     }
26 }
```

7. Silahkan anda jalankan aplikasi anda, dan test untuk mengirim email
